

System Ultra Wash®

UNIVERSAL WASHWARE SYSTEM

System Ultra Wash®

SAFE

Detergent alarm system - built in sensor for low detergent concentration to ensure consistent wash results and pump protection

Watertight plastic case designed and approved for maximum safety in use

Surface safe cleaning solutions for glassware, aluminium, silver, plastic and stainless steel

CONTROL

Concentrated chemicals to offer ultra low cost in use, when accurately controlled with the SYSTEM ULTRA WASH®

Dual level high and low range detergent control for accurate concentration adjustment

Control bacteria or surface corrosion through the flexible chemical choices from Clover

EFFECTIVE

INNOVATION

Clover Chemicals has combined totally effective warewashing chemicals with a dispenser specially designed to maximise their cleaning performance to create the new SYSTEM ULTRA WASH®

Versatile system can be installed to any type of machine in either timed or probed application

Effectively controls water hardness to offer quality cleaning results and protect the machine against water scale

SYSTEM ULTRA WASH® can be fitted to any make or model of industrial dishwashing, glass washing or tray washing machines

Versatile range of chemicals to cope with all types of water conditions and levels of soilage

Compact design to minimise space required to use a automatic dispensing system

System Ultra Wash®

PRODUCT	RECOMMENDED DILUTION RATE (when mixed in the wash tank)
RAPIER	1-4 ml per litre
TRAK	4-8 ml per litre
AUTO GLASS WASH	1-4 ml per litre
RINSE AID	1-2 ml per litre

The highly versatile SYSTEM ULTRA WASH® combines all the options required for modern warewash applications. SYSTEM ULTRA WASH® is an integrated warewashing solution combining a highly technical dispenser with a versatile range of proven chemical cleaning agents. SYSTEM ULTRA WASH® is totally flexible offering one dispenser that is truly universal and can be fitted to any make or model of industrial dish washing, glass washing or tray washing machine. The Clover range of warewashing chemicals offer all the choices required to compliment this dispensing system. Clover Chemicals markets one dispensing unit capable of operating in both dispensing modes.

System Ultra Wash®

- ✓ PERFORMANCE DISHWASHING
- ✓ EFFECTIVE TRAYWASHING
- ✓ ULTIMATE GLASSWASHING
- ✓ STREAK FREE FINISH

Probe/Probeless Mode Switch:
Allows you to select the mode of operation either with or without a conductivity probe.

Door/Conveyor Switch:
Used if operating in "probeless mode".

Low/High Range Switch:
Used only when operating in "probe mode" and selects between the two concentration ranges. High range offers accurate controlled dosage for most applications in normal or hard water areas. Low range only is used in areas of very soft water.

Low/High Audio Switch:
Sets the alarm volume but only applies when operating in "probe mode".

On/Off Rinse Limit Switch: When switched to on it stops the rinse pump after 30 seconds. Switch to off only for specialised conveyor machines.

TIMED APPLICATION

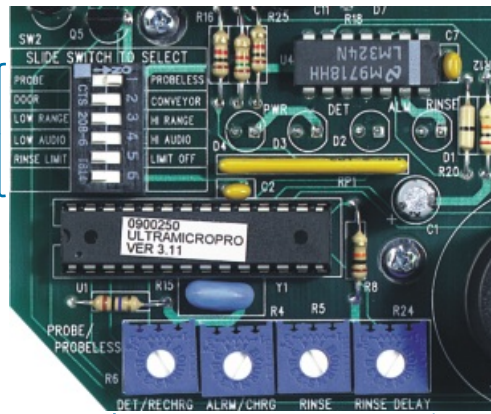

Timed mode works by simply dosing in a specific amount of detergent each time the machine runs a wash cycle and is commonly called probeless application. The dispenser has the capacity to put in one startup charge when the dispenser is turned on after the wash water has been replaced and a smaller top up charge to replace the detergent lost during each wash cycle.

This type of unit is fitted to smaller dishwashing machines or those with shallow wash tanks.

PROBED APPLICATION

This method of application measures conductivity within the wash tank and automatically doses in more chemical when or if conductivity drops. Conductivity is the indication of the detergent concentration within the wash tank.

This type of dispensing application is most commonly fitted to larger machines, flight or conveyor type dishwashing machines, that are in continuous use. Probe operated systems do offer very low cost in use and minimise chemical wastage.

Detergent Concentration or Recharge Dial:

In "probe mode" use to set the detergent concentration in the wash tank. In "probeless mode" set the pump time necessary to recharge and maintain the detergent concentration after each wash cycle.

Alarm Delay or Initial Charge Dial:

In "probe mode" use to set the time before the alarm sounds if the probe senses low detergent concentration in the wash tank. In "probeless mode" use to set the pump time for the detergent startup charge. This then gets the wash water to the correct concentration each time the water is changed.

Rinse Speed Dial:

Adjusts the speed of the rinse aid pump to control the amount of rinse aid dosed in.

Rinse Delay Dial:

Delays the rinse pump from 0 to 14 seconds. Only for use on specialised conveyor machines.

+ To adjust levels to higher settings on all dials turn clockwise

- To adjust levels to lower settings on all dials turn anti-clockwise

Switch Selection

Dial Control

RAPIER

- HIGH CONCENTRATE FOR PERFORMANCE CLEANING
- SPECIALISED NON FOAMING FORMULATION EFFECTIVE AGAINST HEAVY SOILAGE
- OFFERS VERY LOW COST IN USE WASH PERFORMANCE
- SUITABLE FOR USE IN SEVERE HARD WATER AREAS
- IDEAL FOR DISHWASHING AND TRAYWASHING APPLICATIONS

TRAK

- SUITABLE FOR USE ON ALUMINIUM AND SILVER
- BACTERICIDAL ACTION IDEAL IN LOW TEMPERATURE MACHINES
- NON FOAMING FORMULATION IDEAL FOR USE IN BOTH DISH AND TRAY WASHING MACHINES
- EFFECTIVE IN BOTH HARD AND SOFT WATER AREAS
- CHLORINATED FOR OUTSTANDING DESTAINING PROPERTIES

AUTO GLASS WASH

- ULTRA HIGH PURITY FORMULA FOR CONSISTENT WASH PERFORMANCE
- LOW CAUSTIC CONCENTRATION FOR REDUCED RISK OF DAMAGE TO GLASSWARE
- NON FOAMING FORMULATION
- IDEAL IN HARD OR SOFT WATER AREAS
- CAN BE USED WITH OR WITHOUT RINSE AID

RINSE AID

- HIGH CONCENTRATION FOR ULTIMATE PERFORMANCE
- ACIDIC FORMULATION NEUTRALISES ALKALI RESIDUES AND WATER HARDNESS
- DELIVERS OUTSTANDING STREAK FREE AND SPOT FREE RESULTS
- SHEENS AND DRIES CUTLERY, CROCKERY AND GLASSWARE IN AN INSTANT
